Note 1: If Blocking is allowed, the mechanism as described in chapter 5.2.2 of Part 1 of ASTERIX (integration of multiple ASTERIX records into an ASTERIX block) may be used. If Blocking is not allowed, this mechanism may not be used, meaning that each ASTERIX record is sent individually.

Note 2: If an ASTERIX Category is “Managed” by the AMG it means that the Category (from the allocation of the Category number to the publication and maintenance) needs to be endorsed by the AMG. If an ASTERIX Category is “Coordinated” with the AMG it means that the Category number is allocated by the ASTERIX Manager and AMG is only notified about this allocation. Even for categories that are coordinated by the AMG the designer of the Category will be requested to publish the final specification of the EUROCONTROL ASTERIX website, unless it contains confidential information.
